STATEMENT BY FIRM **Herrick & Salsbury, Inc.** began practicing land surveying in April of 1962 as a partnership under the name of A. B. Herrick & Son, Malcolm P. Herrick and Richard C. Salsbury being the principal partners. The corporation of Herrick & Salsbury, Inc. was formed in 1968 and Richard C. Salsbury was the sole stockholder, president and chief of parties. The first office location for Herrick & Salsbury, Inc. was on Main Street in Blue Hill. In 1978, the firm was relocated to Franklin Street in Ellsworth, where it expanded the physical space twice, in 1986 and again in 1999 and stayed until 2008. Unable to expand further at that site, Herrick & Salsbury, Inc. moved to the present location at 130 Oak Street, Ellsworth. The firm currently employs three registered land surveyors and has a total of seven employees. Since our conception, we have been providing surveying and related services to customers, primarily but not limited to, Hancock and Washington Counties.

Herrick & Salsbury, Inc. are proud of their reputation of producing quality boundary surveys, and also have many years of experience in construction and topographic surveys. We also work extensively in the land development business completing subdivisions and commercial site plans from concept to final design and approval. Our experience in the area covers a broad range of services including, but not limited to, deed research and analysis, expert court witnesses, boundary surveying, topographic surveying, tower lease lots, flood plain elevation certificates, road and sewer profiles, road cross-sectioning, volume estimates, building and grade stakeout, as-built surveys, conservation easements, zoning, land use and environmental permitting. With the land use regulatory environment becoming ever more complex in the State of Maine, the concept of a Lead Professional assisting clients in evaluating land use criteria for a given project is being realized by Herrick & Salsbury, Inc. As a Lead Professional, Herrick & Salsbury, Inc. will work with clients to navigate the regulatory process of permitting a project from constructing a driveway or road, retaining wall, building a home, developing a commercial site or a subdivision of land.
